

# Electrical Safety Awareness Training

## Program Overview:

This program is recommended for any individuals who need to have a good understanding, “an awareness” of the safety precautions needed when working around electricity.

This training is **NOT** intended to provide skills or knowledge to perform any electrical tasks.

The focus of this training is on recognizing, avoiding, and reporting electrical hazards.

## Training Content:

- Provides the knowledge needed to work safely with or near electrical equipment.
- Provides a basic understanding of how electricity behaves
- Discusses the Hazards of Electricity
- Provides visual examples of electrical hazards that could potentially be encountered on the job
- Discusses how to recognize real or potential electrical hazards
- Discusses how to avoid personal injury and prevent others from being injured

## Course Duration:

- Four (4) Hours dependent upon number of participants
- Online training for this topic is also available on the ICSS Website.
